

## Dr Weils Spray on Action Plaster

**Price: Action Plaster £6.95; Hand Sanitiser £5.95.**

Do you see a lot of rats on your local fisheries? Following the popularity of their hand sanitiser, which guard against Weil's Disease, Dr Weils now offer this Spray-on Action Plaster.

The plaster applies a transparent, elastic, waterproof film skin over any cuts or abrasions, which will last all day, but can be scrubbed off with soap and water afterwards.

This is an obvious choice for anglers to guard against bacteria

entering the bloodstream, one of the worst being Leptospirosis, a bacteria common in rats' urine, which can develop into potentially fatal Weil's Disease.

Both products have an additional advantage in that they won't taint or 'corrupt' your bait, unlike some other 'perfumed' alcohol gels.

Look out for the new plasters in your local tackle shop, or you can buy them on-line from [www.dr-weils.co.uk](http://www.dr-weils.co.uk)
